Caltrans, *Caltrans Integration Study*, California Department of Transportation, Sacramento, 2003.

This best practice review provides a summary of the financial information management practices of organizations similar to Caltrans.

Caltrans, *Caltrans Integration Study*, California Department of Transportation, Sacramento, 2004.

This document, the Caltrans Integration Study Financial Systems Strategic Plan, represents the final deliverable of the Caltrans Integration Study.

Captaris Incorporated, *South Carolina DOT Deploys Paperless Procurement System with Captaris Workflow*, Bellevue, Wash., 2005 [Online]. Available: http://www.captaris.com/news_and_events/press_releases/print_04_18_2005.html.

Captaris, Inc. (NASDAQ: CAPA), a leading provider of Business Information Delivery solutions, announced on April 18, 2005, that the South Carolina DOT Procurement Division has deployed Captaris Workflow to automate its procurement system and help reach its goal to become a paperless operation.

Chappell, D. and L. Liu. "Web Services Brokered Notification 1.3," 2006 [Online]. Available: http://docs.oasis-open.org/wswn/ws_topics-1.3-spec-os.pdf.

The event-driven, or notification-based, interaction pattern is a commonly used pattern for inter-object communications. Examples exist in many domains; for example, in publish/subscribe systems provided by Message Oriented Middleware vendors, or in system and device management domains. This notification pattern is increasingly being used in a web services context.

Cheng, J. and K.H. Law. *Using Process Specification Language for Project Information Exchange* [Online]. Available: http://www.mel.nist.gov/msidlibrary/doc/psl_pie.pdf.

There are many project scheduling and management programs employed in the construction industry. Standards-based translation is one way to achieve interoperability. This study evaluates the applicability of the Process Specification Language (PSL) for exchanging project information among different applications. PSL has been initiated by the National Institute of Standards and Technology (NIST) and is emerging as a standard exchange language for process information in the manufacturing industry. In this paper, they explore how PSL can be extended for exchanging project information for construction applications.

Cheng, J., M. Gruninger, R.D. Stram, and K.H. Law. *Process Specification Language for Project Scheduling Information Exchange*, 2003.

This paper is organized as follows: Section 2 briefly introduces PSL and discusses the motivation and the major components of PSL. Mapping the concepts between PSL and project management applications is discussed in Section 3. Section 4 describes the parser and the wrappers developed for the exchange of project scheduling information using PSL. Section 5 discusses the potential use of PSL for consistency checking using a logic-based reasoning tool. Examples on information exchange and consistency checking are given in Section 6 to demonstrate the current prototype environment. Finally, Section 7 summarizes the results described in this paper.

Cheng, J. and K.H. Law. *Using Process Specification Language for Project Information Exchange*, Civil and Environmental Engineering Department, Stanford University, Stanford, Calif.

This study evaluates the applicability of the PSL for exchanging project information among different applications. PSL has been initiated by NIST and is emerging as a standard exchange language for process information in the manufacturing industry. In this paper, they explore how PSL can be extended for exchanging project information for construction applications.

Cheng, J., M. Gruninger, R.D. Stram, and K.H. Law. *Process Specification Language for Project Scheduling Information Exchange*, (4), 2003 [Online]. Available: http://www.mel.nist.gov/msidlibrary/doc/psl_pie.pdf.

Many project scheduling and management software systems are being employed in the construction industry. Standards-based translation is one way to achieve interoperability. This study discusses the applicability of the PSL for exchanging project scheduling information among different applications. PSL was initiated by NIST and is emerging as a standard exchange language for process information in the manufacturing industry. This paper explores how PSL can be used for exchanging project scheduling information among software programs in project management. Furthermore, it investigates how PSL could be utilized to reason about potential conflicts and to perform consistency checking on project scheduling information.

Chisholm, G., *Transit Cooperative Research Program*, Mitretek Systems and TransTech Management Inc., Washington, D.C., 2002.

This report includes a clarification of supply-chain terms, discussion of the impact of asset management decisions on parts and inventory management needs, and strategies for streamlining the supply chain. Non-transit fleets with practices identified for emulation include utility fleets, a state DOT

Finding A Way: Encouraging Underrepresented Groups in Geography. An Annotated Bibliography. Pathways in Geography Series Resource Publication, Title. Journal of Geography, 97/1: LeVasseur, M. ().
